No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

LDI491786
3379 bp mRNA linear PLN 28-JUN-2003
Laminaria digitata mRNA for vanadium-dependent bromoperoxidase 1
(VBPO1 gene).
AJ491786.1 GI:32329411
Vanadium-dependent bromoperoxidase 1; VBPO1 gene.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2, Application US/09596794

Patent No. 655515

GRENEAL INFORMATION:

APPLICANT: Vreeland, Valerie

APPLICANT: The Regents of the University of California

TITLE OF INVENTION: Recombinant Minimal Catalytic Vanadium Haloperoxidases

TITLE OF INVENTION: and Their Uses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DRGGECPPNPVFPSDDGLELINFEGACLTYEGEINKLAVNVAFGROMLGIHYRFDGIQGL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 VNFGTSHYFRLIGAAELAQRASCYQKWQVHRFARPEALGGTLHNTIAGDLDADFDISLLE

Sequence 2, Application US/09832616
Patent No. 6506586
General No. 6506586
APPLICANT: Danielsen, Steffen
APPLICANT: Danielsen, Ralle
TITLE OF INVENTION: NACISIC acids encoding polypeptides having haloperoxidase activit
FILE REFERENCE: 10.15.200-US
CURRENT APPLICATION NUMBER: US/09/832,616
CURRENT FILING DATE: 2001-04-11
NUMBER OF SEQ ID NOS: 2
SOFTWARE: Patentin version 3.0
SEQ ID NO 2
LENGTH. 605
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       111 -----ATVLKALIGLDRGGECFPNPVFPSDDGLELI-----NFEGAC-LTYEGEINKL 157

Patent No. 6503508

GENERAL INFORMATION:
APPLICANT: Danielsen, Steffen
TITLE OF INVENTION: Polypeptides having haloperoxidase activity
FILE REFERENCE: 10042.200-US
CURRENT APPLICATION NUMBER: US/05/832,496
CURRENT FILING DATE: 2001-04-11
NUMBER OF SEQ ID NOS: 2
SOFTWARE: PatentIn version 3.0
SEQ ID NO 2
LENGTH: 605
                                                                       OTHER INFORMATION: Description of Artificial Sequence:conserved OTHER INFORMATION: vanadium-binding region 3, amino acids 591-609
                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8.4%; Score 87.5; DB 4; Length 605; 23.2%; Pred. ## Sequence 20135, Application US/09252991A
### Sequence 20135, Application US/09252991A
### Patent No. 6551795
### GENERAL INFORMATION:
### APPLICANT MATC J. Rubenfield et al.
### TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
### TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
### TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
### TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
### CURRENT APPLICATION NUMBER: US/09/25,991A
### CURRENT FILING DATE: 1999-02-18
### PRIOR FILING DATE: 1998-02-18
### PRIOR FILING DATE: 1998-07-27
### NUMBER OF SEQ ID NOS: 33142
### SEQ ID NO 20135
### ILING DATE: 155
### ILING DATE: 1615
### ILING DATE: 1615

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                   ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 9, Application US/09840762A;
Sequence 9, Application US/09840762A;
Patent No. US2002035245A1
GENERAL INFORMATION:
APPLICANT: Vreeland, Valerie
APPLICANT: Treeland, Valerie
APPLICANT: The Regents of the University of California
TITLE OF INVENTION: Recombinant Vanadium Haloperoxidases and Their Uses
FILE REFERENCE: 023070-0871000S;
CURRENT FILING DATE: 2001-04-23
PRIOR PELLOATION NUMBER: US/09/840,762A
PRIOR PELLOATION NUMBER: 09/151,189
PRIOR FILING DATE: 2001-04-23
NUMBER OF SEQ ID NOS: 11
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 9
LENGTH: 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Sequence 11, Application US/10691383

Sequence 11, Application US/10691383

Publication No. US20040110260A1

GENERAL INFORMATION:

APPLICANT: Vreeland, Valerie

APPLICANT: The Regents of the University of California

TILE OF INVENTION: Recombinant Minimal Catalytic Vanadium Haloperoxidases

TILE REPREBENCE: 023070-087110US

FURRENT FILING DATE: 2003-10-21

PRIOR FLING DATE: 2003-10-21

PRIOR PELICATION NUMBER: US/09/596,794

PRIOR APPLICATION NUMBER: US 09/151,189

PRIOR PELING DATE: 1998-09-10

NUMBER OF SEQ ID NOS: 20

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 11

Fucus vanadium bromoperoxidase polypeptide and coding sequence, useful for halogenating or oxidizing compounds, e.g. as antibacterial agents.

Claim 5; Page 42-44; 46pp; English.

This sequence represents a vanadium bromoperoxidase from species of Fucus. This enzyme is 73.4 kD in mass and catalyses the oxidation of o-

```
dianisidine (ODA) when complexed with a vanadium ion. The cDNA encoding the enzyme was isolated from a Fucus 2-call embryo cDNA library using the the probes (AAAA10306-A10307) corresponding to the second and third regions that are conserved between Curvularia and Ascophyllum canadium haloperoxidase active sites. Fucus vanadium bromoperoxidase

CC CONAS (One Full-length, two 5. - truncated) were then cloned into the pET LIC (ligation independent cloning) vector for expression in Escherichia coli. The vanadium bromoperoxidase proteins were expressed fused to an New terminal thioredexin tag which optimises correct folding. The Pucus vanadium bromoperoxidase has a specific activity several-fold higher than other algal vanadium haloperoxidases for which at least partial sequences wardising a compound. They can be used to halogenate various substances, cancluding proteins. They can be used to halogenate various substances, cancluding proteins. They can be used to broduce epoxides from alkenes including proteins. They can be used to produce epoxides from alkenes from cyclopropanes, and to produce alpha, gamma-halohydrins from cyclopropanes, and to produce alpha, gamma-halohydrins from cyclopropanes, and to produce alpha, gamma-halohydrins compounds, making them useful in signal generating systems in place of horseradish peroxidase. The enzymes can also be used as enzymatic antimicrobial agents and in the production of phenolic adhesives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 676 AA;

```
The invention relates to nucleic acid encoding vanadium haloperoxidase particularly vanadium bromoperoxidase polypeptide which consists of a catalytic helical frame that complexes a vanadium ion and catalyses the catalytic helical frame that complexes a vanadium ion and catalyses the coxidation of 0-dianisidine (DAA). The invention also provides to cinvention can be fused to other proteins to allow quantification or invention of the linked protein. They can be used to halogenate various substrates including proteins; to produce epoxides from alkenes, control protopanes and to produce alpha, gamma-halohydrins from cyclopropanes and to produce dihalogenated products from alkenes alwayenes. They can also be used in signal generating systems in place of alkynes. They can also be used in signal generating systems in place of antimicrobial agents; and in the production of phenolic adhesives. The polypeptides can be used in industrial catalysis in a variety of contexts, e.g. catalyst for halogenation, oxidation, and epoxidation catactions. The present sequence is Fucus distiches vanadium creactions. The present sequence is Fucus distiches vanadium haloperoxidase. (Updated on 07-AUG-2003 to correct OS field.)

The present sequence is Corallina pilulifera vanadium bromoperoxidase 1 (WBPO). The vanadium haloperoxidase, especially vanadium bromoperoxidase (WBPO) is useful for signal generation in analytical systems, and as anti-microbial agents. The VBPO is also useful for industrial applications. The VBPO is also useful for industrial applications. The VBPO is also useful for detecting a wide variety of chemical and biological materials such as amino acids, peptides, polypeptides, proteins including enzymes, avidin, antibodies and antigenic proceins, carbohydrates including monosaccharides, polysaccharides and ilpopolysaccharides, hormones such as human chorionic gonadotropin, thyroid stimulating hormone, luteinising hormone, thyroxine, follicle stimulating hormone, parathyroid hormone and growth hormone, metabolites such as Blucose, lactate and pyruvate, oligonucleotides, nucleic acids, vitamins such as Bl2 and biotin, intext cells from various organisms including microorganisms and drugs such as narcotics, therapeutic and

The vanadium haloperoxidase, especially vanadium bromoperoxidase (CWBCO) is useful for signal generation in analytical systems, and as anti-microbial agents. The VBPO is also useful for detecting a wide systems, and as anti-microbial agents. The VBPO is also useful for detecting a wide variety of chemical and biological materials such as amino acids, peptides, polypeptides, proteins including enzymes, avidin, antibodies and antigento proteins, carbohydrates including monosaccharides, polypeptides, carbohydrates including monosaccharides, gonadotropin, thyroid stimulating hormone, luteinising hormone, thyroxine, follicle stimulating hormone, parathyroid hormone and growth hormone, metabolites such as glucose, lactate and pyruvate, oligonucleotides, nucleic acids, vitamins such as B12 and biotin, intact cells from various organisms including microorganisms and drugs such as narcotics, therapeutic and those abused
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is Corallina officinalis (marine red algae) vanadium

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This represents a haloperoxidase enzyme, CP.BPO1. The haloperoxidase genes encoding the enzymes CP.BPO1 and CP.BPO2 are isolated from Corallina pilulifera. A host cell transformed with a vector containing the haloperoxidase genes can be used for the recombinant production of the enzyme. The haloperoxidases of the invention are vanadium-dependent and have halide specificity of bromine and iodine
                                                                                                                                                                                                                                                                                                                                                                                                                        Haloperoxidase; enzyme; CP.BP01; CP.BP02; vanadium; halide specificity; bromine; iodine.

The haloperoxidase genes encoding the enzymes CP.BP01 and CP.BP02 are isolated from Corallina pilulifera. A host cell transformed with a vector containing the haloperoxidase genes can be used for the recombinant production of the enzyme. The haloperoxidases of the invention are vanadium-dependent and have halide specificity of bromine and iodine
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Haloperoxidase; enzyme; CP.BP01; CP.BP02; vanadium; halide specificity; bromine; iodine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (VBPO). The variatium haloperoxidase, especially variatium bromoperoxidase (VBPO) is useful for signal generation in analytical systems, and as anti-microbial agents. The VBPO is also useful for industrial applications. The VBPO is also useful for detecting a wid variety of chemical and biological materials such as amino acids, peptides, polypeptides, proteins including enzymes, avidin, antibodies and antigenic proteins, properties including monosaccharides, polypaccharides and lipopolysaccharides, hormones such as human chorionic gonadotropin, thyroid stimulating hormone, luteinising hormone, inversine, follicle stimulating hormone, parathyroid hormone, and growth hormone, metabolites
                                                                                                                                                                                                                                                                                                                                                                                                                                        Vanadium bromoperoxidase, VBPO, haloperoxidase, signal generation; analytical system, anti-microbial agent, industrial application, biological material; avidin; metabolite; lipopolysaccharide; human chorionic gonadotropin; luteinising hormone; vitamin; intact cell;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to nucleic acid encoding vanadium haloperoxidase particularly vanadium bromoperoxidase polypeptide which consists of a catalytic helical frame that complexes a vanadium ion and catalyses the oxidation of o-dianisidine (ODA). The invention also provides recombinantly produced vanadium haloperoxidases. The polypeptides of the invention can be fused to other proteins to allow quantification or localisation of the linked protein. They can be used to halogenate various substrates including proteins; to produce appa, gamma-halohydrins halogenated ketones from alkynes; to produce alpha, gamma-halohydrins from cyclopropanes and to produce dihalogenated from alkenes and alkynes. They can also be used in signal generating systems in place of horseradish peroxidase; as a component in assays; as enzymatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                horseradish peroxidase, as a component in assays, as enzymatic antimicrobial agents; and in the production of phenolic adhesives. The polypeptides can be used in industrial catalysis in a variety of contexts, e.g. catalyst for halogenation, oxidation, and epoxidation reactions. The present sequence is Fucus distiches vanadium haloperoxidase conserved vanadium-binding region. (Updated on 07-AUG-2003

The invention relates to nucleic acid encoding vanadium haloperoxidase particularly vanadium bromoperoxidase polypeptide which consists of a catalytic helical frame that complexes a vanadium ion and catalyses the coxidation of o-dianisidine (ODA). The invention also provides to combinantly produced vanadium haloperoxidases. The polypeptides of the invention can be fused to other proteins to allow quantification or comparation substrates including proteins; to produce apoxides from alkenes, various substrates including proteins; to produce alpha, gamma-halohydrins them cyclopropanes and to produce dihalogenerad products from alkenes and alkynes. They can also be used in signal generating systems in place of charseradish peroxidase; as a component in assays, as enzymatic antimicrobial agents; and in the production of phenolic adhesives. The contexts, e.g. catalyst for halogenation, oxidation, and epoxidation contexts, e.g. catalyst for halogenation, oxidation, and epoxidation of thalogenery of correct of the present sequence is Fucus distiches vanadium to effect to the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the correct of the co

The invention relates to nucleic acid encoding vanadium haloperoxidase particularly vanadium bromoperoxidase polypeptide which consists of a catalytic helical frame that complexes a vanadium ion and catalyses the oxidation of o-dianisidine (DDA). The invention also provides recombinantly produced vanadium haloperoxidases. The polypeptides of the invention can be fused to other proteins to allow quantification or localisation of the linked proteins. The polymentification or localisation of the linked proteins; to produce appaid semantalenes, various substrates including proteins; to produce epoxides from alkenes, thalogenated ketones from alkynes; to produce alpha, gamma-halohydrins from cyclopropanes and to produce dihalogenated products from alkenes and large of be used in signal generating systems in place of norseradish peroxidase; as a component in assays; as enzymatic altimicrobial agents; and in the production of phenolic adhesives. The polypeptides can be used in industrial catalysis in a variety of contexts, e.g. catalyst for halogenation, oxidation, and epoxidation reactions. The present sequence is fucus distictors vanadium

RESULT 12

```
This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            64 ------VLIKRLVR----RQRPDHPAI-----AVNVDTPSQLSFPSAHATSTTAAALLM 107
